# FibreClean colour coded cleaning equipment has a dramatic impact on minimising cross-contamination.

Our popular colour-coded FibreClean range of hygiene system tools are all manufactured to a high quality, food grade approved standard.

Hygiene Technologies has pioneered colour coding for the food industry in New Zealand and has undergone continued development based on customer feedback.

The colour coded line-up continues to expand with over 1000 items available in this range.

The extensive FibreClean range comes in up to 11 colours and includes:

- Brushware, squeegees & handles
- Dustpans & sets
- Buckets, scoops, scrapers and shovels
- Shadow Boards & tool holders
- Scrubbers, wipers & cloths
- Mopping systems
- Detectable cleaning tools & supplies

If you haven't implemented a colour coding system to minimise contamination then talk to us now.

Food grade approvals, compliance declarations and other resources available - see page 54 for more information.

## Introduction to Fibreclean

The Fibreclean range of hygiene tools has the most colours available on the market, however we stock the colours that are ordered regularly. See at right for full colour range available.

The colours most commonly stocked are -1 through to -8, however if there are any items or colour options you require that are not listed here, please contact our customer services team.

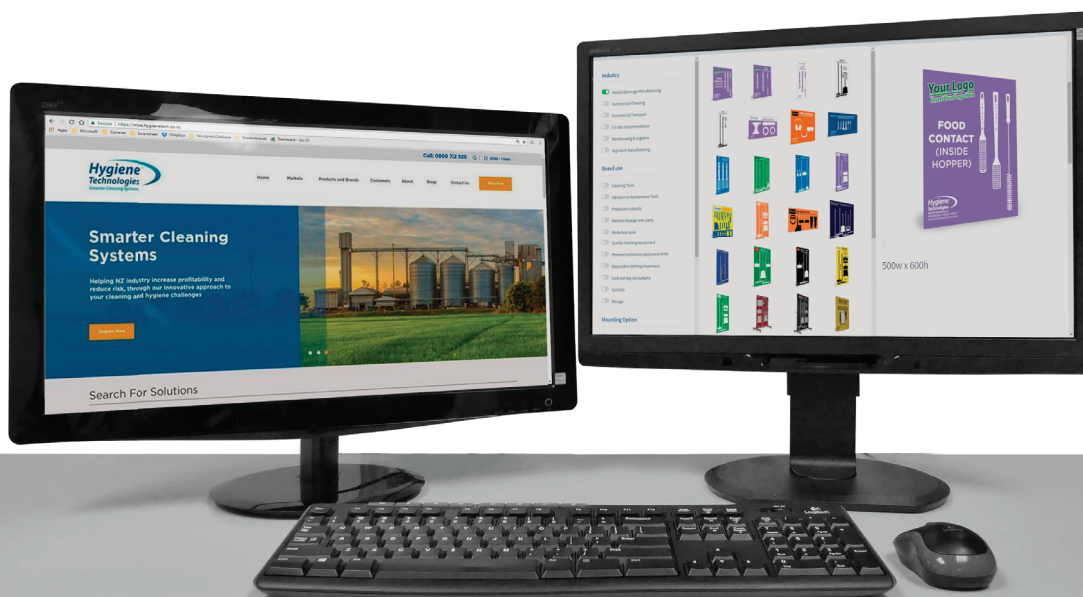

We update this catalogue regularly, however the colour options we hold in stock may change - refer to our website for the most up to date information.

## How to order specific colours

When ordering please add colour code after the product code:

eg. FB10548 - 2 = Churn Brush --> Blue

# Standard Handles

FibreClean standard (non-telescopic) handles are legendary for their long-lasting ability in a tough industry. Made in NZ, to exacting specifications, these handles deliver a long service life, hygienic and easy-clean design and ergonomic comfort for the user.

The workhorse of the range is the aluminium style, with the fibre-reinforced polypropylene available for use in specialised areas. The Headlock handle joint is standard across the range for all brushes and squeegees.

### Ergonomic Grip

The coloured hand-grip on the Ergo-style handles positively reinforces the colour-coded theme on your site, and the hanging hole allows all items to be stored off the floor. The Ergo grip is more comfortable for the operator to hold onto and protects their hands when working in cold environments.

### Heavy Duty Aluminium Tube

The welded aluminium tube used in the FibreClean handles is anodised to give it extra resistance to wear, and has a 1.6mm wall thickness for increased strength and rigidity.

### Ultra Hygiene One-Piece Handle

For use in critical hygiene areas or when regularly exposed to corrosive chemicals that would damage aluminium. The Ultra Hygiene Handle is moulded out of fibre-reinforced polypropylene, in one piece. That means there is no joins or crevices for dirt and bacteria to accumulate and it can also withstand strong corrosive chemical mixtures without corroding. The fibre reinforcing adds strength and rigidity.

# Telescopic Handles

Telescopic poles are a very cost effective option compared to hiring access equipment and there are a number of attachments available to tackle most tasks.

### Product Availability

These items are available by indent only and in the following sizes: 1600-5300mm and 1900-9500mm. Please contact your account manager for more information.

**Headlock Handle Joint**

The unique headlock handle joint consists of a hexagonal locator plug and a threaded collar that locks down onto the broom or squeegee head.

This makes it easier to clean than internal thread types and gives a very strong joint between handle and head, that won't twist undone when locked.

**Flagged bristles**  
Most of these wash brushes have 'flagged bristles' which is a process that makes the ends of the filaments softer, ideal for cleaning sensitive paintwork.

The flagging process also has the benefit of holding moisture to save reapplying chemical as often.

# Hygiene & Food Safety Equipment

Look for these symbols

## Transport Range

Any products with this symbol are suitable for vehicle cleaning. These are not limited to the transport industry but are the most popular for this application.

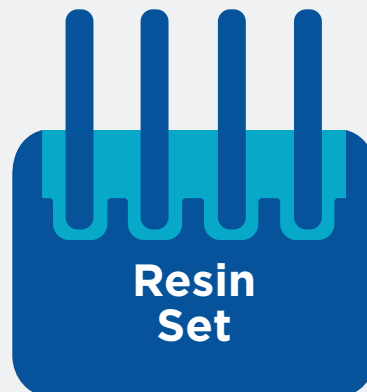

## Water Fed

Water Fed items are designed to connect to a wash down hose. Fibreclean water fed brushes are uniquely designed so that water comes out every tuft of bristles.

## Detectable

This symbol is to indicate which items are made of metal and X-ray detectable plastic. These tools are designed for food manufacturers that require food products to go through a metal detector.

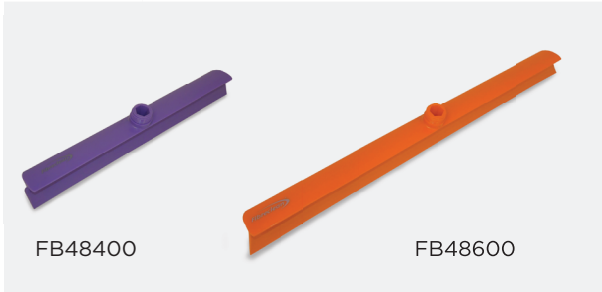

## Resin Set

Resin set brush bodies are specially moulded to form a recess on the receiving side for bristles. Once the bristle clumps have been secured into the brush stock, food grade resin is flooded into the recess, surrounding all bristles and left to set.

**Single blade squeegees**  
The most popular option, this design should be used wherever hygiene is the most important factor, as they are very easy to clean and sanitise.

They are one piece with no joins - the soft rubber blade is moulded into the solid plastic back for ultimate durability and hygiene.

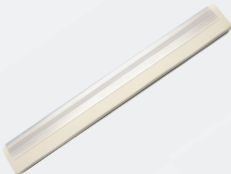

**Double blade squeegees**  
Excellent at removing a lot of liquid or slurry quickly and leaving the surface dry behind them.

When the rubber blades wear out, just replace them with a new cartridge.

## Dustpans and components

Code	Size / Description	Qty Box	Most Popular	Colour Options											
FB80210	Lobby dustpan complete with angle-cut sweeper and connecting clip	1		1	2	3	4	5	6	7					
FB80201	Lobby dustpan, replacement component	1		1	2	3	4	5	6	7					
FB80205	360x335mm, Handheld pan, Covererd lid	2			2	3	4	5		7					
FB80302	300x333mm, HD dustpan	6		1	2	3	4	5	6	7	8	9	11	12	
FB40195	300mm, Stiff, Angled Sweeper	1		1	2	3	4	5	6						
FB80204	70x32mm, Clip for Lobby dustpan	1		1	2	3	4	5	6	7					
BR086	300x240mm, Click together brush & pan set, Medium, 60mm bristle	6		1	2	3	4	5	6						

**Hand Shovel**

The hand shovel is ideal where a greater capacity than the standard FB80301 is required. Although it has more capacity, it is narrower than the FB80301 meaning it will fit inside the Ergo Bucket when emptying. Please refer to page 24 for this option, or visit [www.hygienetech.co.nz](http://www.hygienetech.co.nz)

**Lobby dust pan**

designed to take both dry debris or liquids with a high capacity for dry waste and can hold 700ml of liquid in the open position.

The pan can then be fully closed for safety until emptied. The pan is stable in both open and closed positions.

### Spill kits

Spill kits contain everything you need to efficiently clean up after any incident. The 4 different kits are specific to all likely incidents - Glass and brittle plastics, powdered, solid and liquid allergens. Reduce downtime and give yourself peace of mind that everything is contained in the kit when it is needed, including a laminated instruction sheet. The box has a tamper proof seal to ensure all items remain in the kit ready for use.

A list of replacement items for your kit, check out page 23, or on our website [www.hygienetech.co.nz](http://www.hygienetech.co.nz)

# Shadow Boards

Market leading, bespoke, full colour shadow board systems to enhance your workplace

*'A place for everything and everything in its place'*  
that's the promise behind our fully customisable, durable and easy to clean Fibreclean Shadow Boards.

**Fibreclean Shadow Boards**  
Since 2002 when we introduced colour coded hygiene grade tools to the food processing markets in New Zealand, we have been constantly developing and improving the Fibreclean range based on customer feedback. We now lead the way with the high quality bespoke shadow boards that are loaded with unique benefits to help you reduce risk and improve hygiene and efficiencies.

Download our **Fibreclean Shadow Boards** catalogue for more details on all shadowboard options, or visit [hygienetech.co.nz/Fibreclean-Shadow-Boards](http://hygienetech.co.nz/Fibreclean-Shadow-Boards)

# Shadow Boards & Tool Storage

## Mounting options

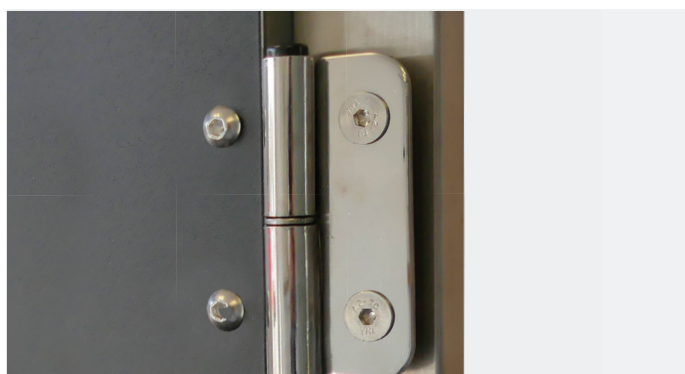

### Direct Fix

Lowest cost board and can be mounted to most wall types. A suitable sealant can be placed around the board edge for hygiene purposes if required. Method of mounting board to the wall is decided by customer.

### Stand-off

Stainless stand-off mounts that are attached to the wall structure. Can hose water or blow compressed air down behind board to clean, or can be easily removed for manual scrubbing.

### Left Hinged or Right Hinged

For high hygiene areas to allow for easy access to clean behind the board.

### Magnet

The magnet option allows you to attach and detach your Shadow Board to any steel or coated surface, without drilling holes into your walls.

## Laminate options

### Standard Laminate

This laminate film has been chemical and scratch tested, to ensure the long-life of your Fibreclean Shadow Board whatever your environment.

### White Board Laminate

This transparent matt laminate film is extremely scratch-resistant and perfectly suited for production boards or as an addition to Shadow Boards, that require written messages to be communicated between shifts or team members.

# Shadow Boards & Tool Storage

## Shadow board sizes

### Imagine your board

If you can dream it, we can print it. From full board size pictures to intricate tables, think of what works best for you.

Visit [hygienetech.co.nz/FibreClean-Shadow-Boards-Gallery](http://hygienetech.co.nz/FibreClean-Shadow-Boards-Gallery) to get some inspiration or ideas.

We have a range of board shapes and sizes that fit most situations - see the relative sizes below. All of our boards come with Standard Laminate unless White Board Laminate has been requested.

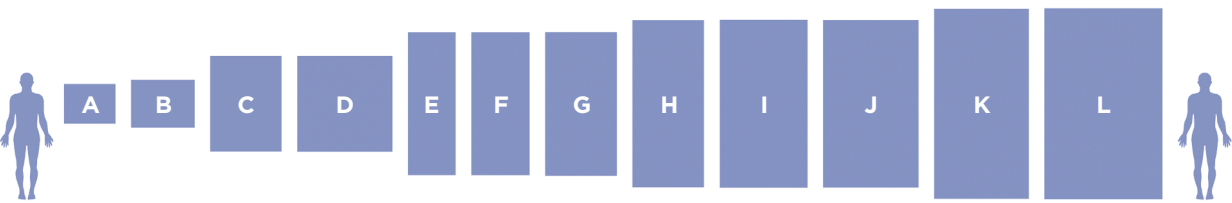

Board B

Board G

Board J

## Hanging options

### Stainless Steel hooks

Heavy duty stainless steel hooks in single and double configuration. These can be mounted anywhere on the board, giving flexibility to fit more items on the board. Can be used to hang items with hanging holes in them, or to horizontally support items with no hanging hole.

SH538

SH540

### Safety design

Safety design - with the prong facing inwards, there is no risk of serious injury if anyone trips and falls against the hook. Also means the tool hangs out from and doesn't touch the board.

SH542

### Clip & bolt set

For hanging items like gloves - Comes as a set with mounting bolt & nut for attaching to the board.

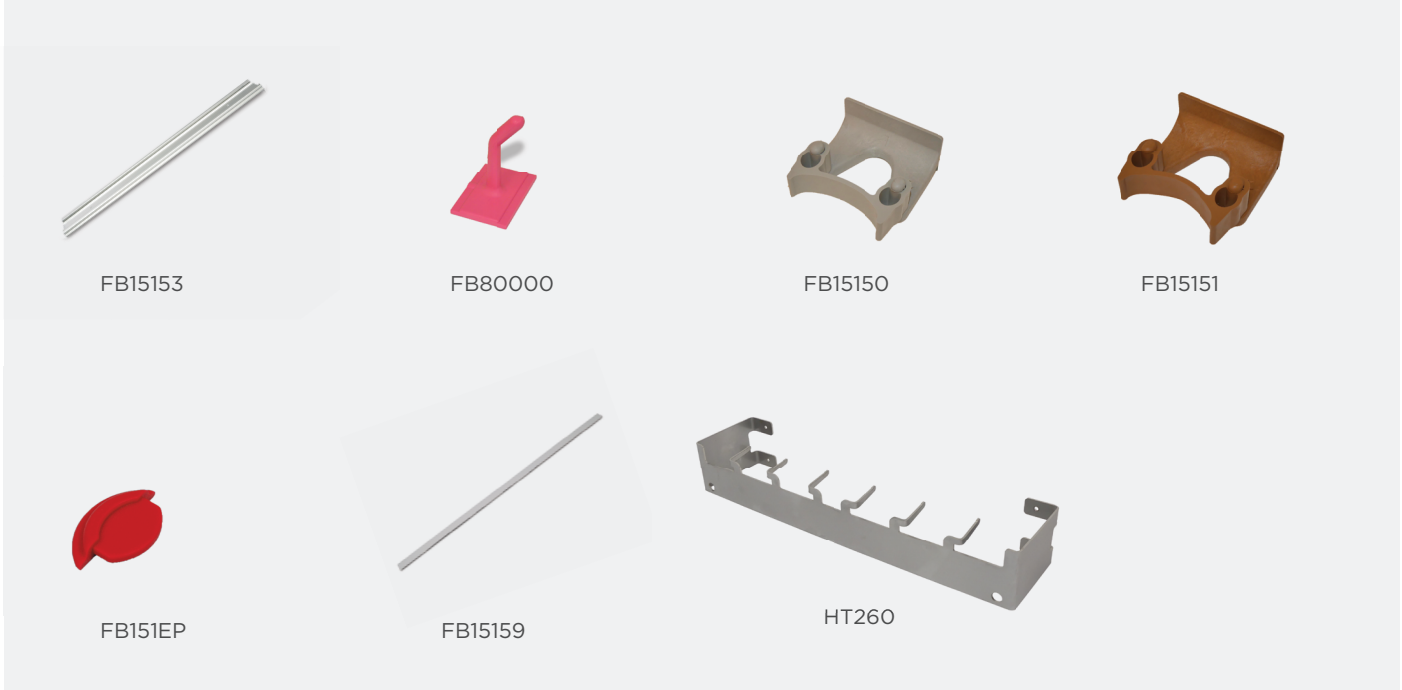

SH546

# How Microfibre works

**Microfibre Cloths**

Lifts and Locks dirt & moisture deep within the fibres

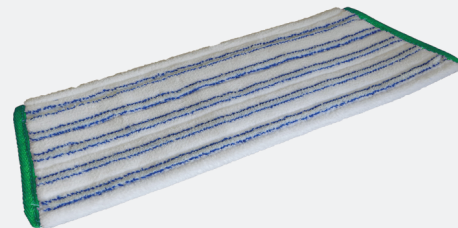

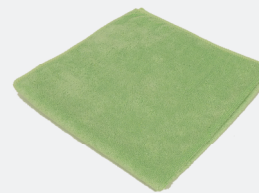

**Conventional Fibre Cloths**

Pushes and scatters dirt & moisture - leaves residue behind

## Benefits of Fibreclean Microfibre:

- Reduce chemical usage by a minimum of 70%
- Superior cleaning results.
- A safer environment for people in the facility.
- Time savings - standard daily cleaning tasks can be achieved in 30% less time than conventional procedures.
- Longer life for surfaces of fixtures due to the non-abrasive cleaning process.
- The Fibreclean System has documented cleaning procedures which create a bench-mark for training staff and keeping staff from developing bad cleaning practices.
- Operator ergonomics - people working with the Fibreclean tools on a daily basis constantly report how their necks, arms and backs feel a lot better at the end of the day when compared with conventional cleaning systems.

# How Macrofibre works

**General surfaces**

Have dirt hidden deep in the crevices

**Abrasive pads**

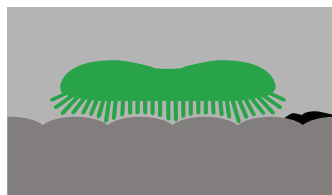

Scratch the surface but doesn't deep clean

**Soft cloths**

Skim the surface but doesn't deep clean

**Macrofibre**

Non-abrasive fibres get deep into every crevice

# Flat Mops - Styles & Uses

The Fibreclean range boasts a number of different styles of flat mops, all used in different ways to achieve excellent results in diverse applications. Legendary for their long lasting performance, the Fibreclean flat mop range is the gold-standard for those who demand low life-cycle costs, environmental sustainability, and high performance cleaning.

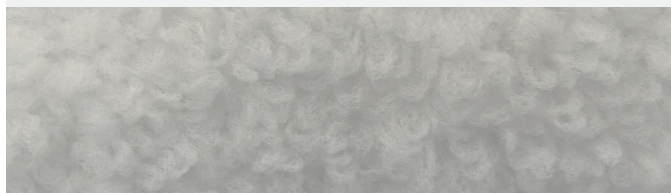

## General Purpose - Micromop

The workhorse of the range.  
Use damp, for all hard floor types except 'safety grip' vinyl or tiles.  
Product codes: FC200, FC204, FC208

## Dry Dust Mop - Wrap over style

Polyester static mop for wrap-over style mop holders. Creates far more static and easier to clean than cotton static mops  
Use dry, for medium-fine dust collection.  
Product codes: FC104, FC108

## Long pile Micromop

Long, dense microfibre pile for specific applications.  
Use dry, for excellent very fine dust removal in one pass.  
Use damp, (40cm size only) for removing heavy grease build-up or stainless steel and smooth floors.  
Product codes: FC206, FC209, FC210

## Dry Dust Mop - Velcro style

Polyester static mop for velcro-style mop holders. Creates far more static and easier to clean than cotton static mops  
Use dry, for medium-fine dust collection.  
Product codes: FC100

## Robust Mop

Specialist mop. Use damp, for scrubbing 'safety grip' vinyl or tiles and profiled floors and removing shoe-scuff marks.  
Use wet, for applying acrylic floor polish to floors.  
Product codes: FC212, FC216

## Disposable Microfibre Mop

Single use, high performance microfibre mop - for critical hygiene situations or when laundering is not feasible.  
Use dry, for fine dust removal. Use Damp, for general hard floor cleaning.  
Product codes: FC410

# Detectable Range

The plastic used in our Fibreclean detectable range is both metal detectable and X-Ray visible. You will see in this section a core range of items available, however other options including brushes with detectable bristles are also available on request.

We promote **'Prevention before detection'** so tool quality is important, irrespective of detectability.

It is dangerous to assume all pieces of detectable material can be found by your inspection system, regardless of the size. In the same way your inspection system will not find a piece of metal below its range of sensitivity, it will also not find the smallest piece of detectable plastic.

A positive detection depends on a wide range of factors such as the position of contaminant in the aperture, the type/size/shape/orientation of contaminant, the frequency of the detector, the line speed and type of packaging in use to name a few.

We offer metal/X-Ray detectable sample pieces at no charge as shown to test through your machine. Please contact us for more advice on this process.

# Retreeva Global Range

The Retreeva Global range of Detectable pens are the new benchmark of detectability, durability and usability. With several unique and innovative design features and a large range of colours and styles available, Retreeva Global offers the best value for money in detectable pens anywhere.

## Highly visible ink indicators

Dominant top button and large window identify ink cartridge colour.

## Positive retracting mechanism

Cartridge will not jump out of position however much pressure is exerted on writing point.

## Unique cartridge suspension

Provides that firm writing experience without the need for a metal spring.

## Smooth finish

Comfortable to hold, retains grip and easy to clean whether in a greasy production area or a sub-zero storage area.

## Long writing life

In regular, pressurised and gel inks.

## No spring in retractable pens

Springs are very difficult to detect if the pen becomes damaged.

## One piece

No separate indicator ring, eliminates potential hazard.

## Large lanyard loop

Intended for a real lanyard, not just a thread.

## Strong pocket clip

Designed as virtually unbreakable. No need to specify model without clip.

## Safe under duress

Moulded from shatter resistant polymers to avoid splintering if crushed.

## Contoured for thumb and finger

With textured surface for enhanced grip.

## Detectable housing

Metal detectable and x-ray visible pens moulded from FDA food contact approved polymers.

**You may also like...**  
Our non-detectable hand scoops, with three sizes of scoop available in up to 6 colours, there will be a scoop for every application. If using for ingredients, you can colour coordinate the scoop with our Ergo bucket or range of ingredient bins, which is great for allergen control. Store the scoops when not using them on our colour matched Fibreclean tool Holder system and avoid cross contamination.

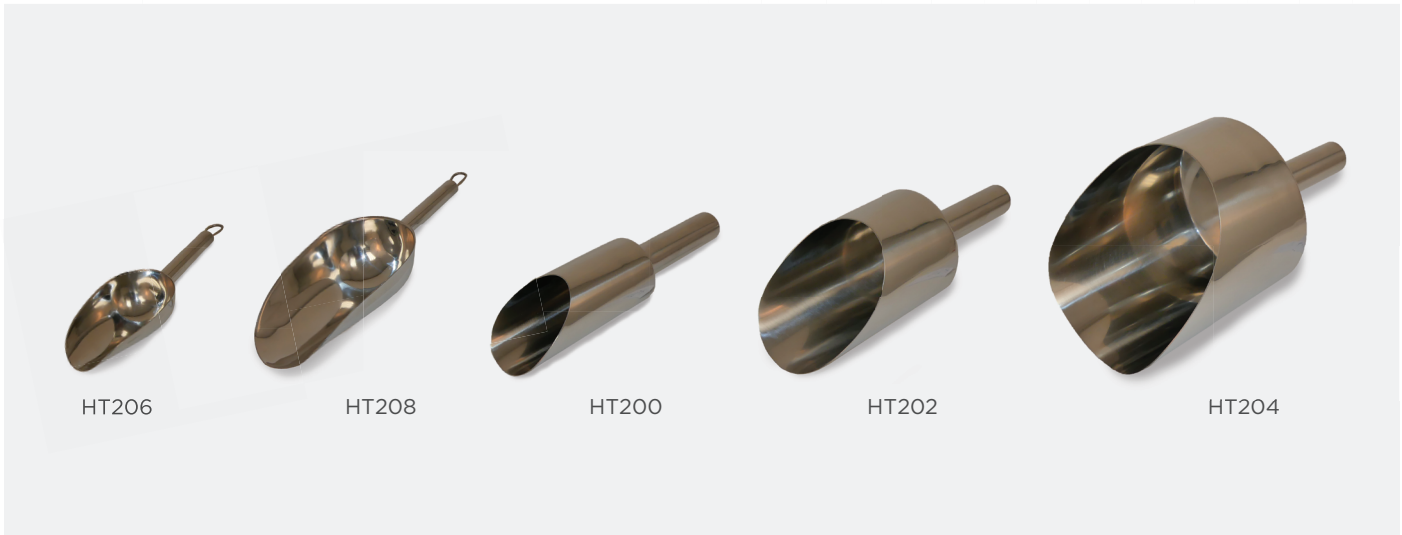

Please refer to page 26 where you can find the other handscoop options, or visit [www.hygienetech.co.nz](http://www.hygienetech.co.nz)

# FibreClean Resource Material

The FibreClean product range is supported by extensive resources available to the end user, which as explained here, fall under three different categories :

## 1. Training guides & Educational videos

These have been developed to educate and help our customers to use the FibreClean tools to best practice standards and to implement robust food-safety measures in their organisation.

- How to clean and care for your FibreClean tools after use
- How to choose the best colour coding policy for your site
- Three simple steps to improve your allergen management
- Why FibreClean?
- How to install the FibreClean Tool Holder System
- Tips for cleaning at heights

If you feel another subject not covered under these headings would be helpful to you or your staff, in relation to the FibreClean range, then please send your request to [info@hyginetech.co.nz](mailto:info@hyginetech.co.nz) for consideration

In Partnership with

## 2. Food grade approvals & Migration documents

For the bulk of the FibreClean colour coded products range, we provide up-to-date documentation to prove that they comply with the latest food contact article regulations internationally, including USFDA and EU standards.

Also available are plastic migration test results for individual components used in the FibreClean products, to prove that they will not migrate into foodstuffs or food contact surfaces, under normal conditions of use. The majority of the FibreClean products are manufactured by BRC Accredited Suppliers.

## 3. Auditing & Care documents

The fitness-for-purpose and length-of-life of your cleaning tools can be significantly improved if you follow our recommendations on how to care for and maintain them, and how to audit their condition regularly.

To make it easy to do so, we have produced a comprehensive "Auditing and Care document" which can be personalised for your company, and which details the steps of how to audit your tools, what to look for, what to do and how to care for different sorts of products. This is designed to dovetail in with your internal quality system..
